No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

* NOTE: This is a 'working draft' sequence. It currently

* consists of 22 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.

Lobinite acquenciary Consolitium.

Direct Submission

Submitted (13-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On May 13, 2003 this sequence version replaced gi:23604383.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgum sequencing reads assembled using Atlas (http://www.hgsc.bcm.tuc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a' contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence on the sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgum sequence reads. Both end sequences and whole genome shotgum sequence reads. Both end sequences and whole genome shotgum sequence only contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Submitted (12-JAN-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

The invention relates to 24 novel human proteins designated NOV1-NOV14 (ABB09501-ABB09524), collectively referred to as NOVX proteins, and nucleic acids encoding them (ABQ93879-ABQ93902). NOVX proteins and nucleic acids encoding them (ABQ93879-ABQ93902). NOVX proteins and collectides are useful in the meantacture of a medicament for treating such disorders are associated with specific applications described for each of the 24 (SOVX proteins, based on their homology to known proteins. Various disorders are associated with NOVX proteins including neurological disorders (e.g., Alzheimer's, Huntington's and Parkinson's diseases), colorectal cancer, leukaemia and osteosarcoma), immune disorders (e.g., Alzheimer's, Huntington's and Parkinson's diseases), colorectal cancer, leukaemia and osteosarcoma), immune disorders (e.g., allergies and autoimmune disoraces, endometriosis, asthma, various forms of arthritis, diabetes, thyroiditis, cardiovascular disease (e.g., hypertension), reproductive disorders, endometriosis, asthma, continence, psoriasis, scleroderma, alopecia, ulcers, pancreatitis, dispertension), reproductive disorders, endometriosis, colorectal cancer, and particularly cardiomyopathy, atherosclerosis, cell signal processing-related disorders and disorders of metabolic pathway regulation. NOVX nucleic acids and polypeptides may be used to identify cellular receptors or domestream effectors which confidentification of small molecules that modulate or inhibit processes such indentification, haematopoiesis, wound healing and angiogenesis. NoVX nucleic acid sequences can be used to identifying and cloning NOVX homologues in other cell or producing non-human comprising NOVX nucleic acids are useful for studying the function and are useful as a source of primers or probes for forensic biony and comprising only more are useful for studying the function and cransgenic animals which are useful for studying the function and conjugated are useful for producing non-human comprehenses and polypers are useful for producin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel polypeptides and nucleic acids homologous to transmembrane receptor, thymosin, neuromodulin-like family of proteins for diagnosing, treating cancer, atherosclerosis; neurological, skin and autoimmune

The invention relates to 24 novel human proteins designated NOVJ-NOVJ4 (ABB09501-ABB09524), collectively referred to as NOVX proteins, and nucleic acids encoding them (ABQ9879-ABQ993902). NOVX proteins, and nucleic acids encoding them (ABQ9879-ABQ993902). NOVX proteins, and nucleic associated disorders or in the manufacture of a medicament for treating such disorders with specific applications described for each of the 24 (NOVX proteins, based on their homology to known proteins. Various disorders (e.g., Alzheimer's, Huntington's and Parkinson's diseases), disorders (e.g., allergies and autoimmune diseases), myasthenia gravis, cancers (e.g., allergies and autoimmune diseases), myasthenia gravis, asthma, various forms of arthritis, diabetes, thyroiditis, cardiovascular disease (e.g., hypertension), reproductive disorders, endometriosis, incluned gravis, asthma, incontinence, peoriasis, scleroderma, alopecia, ulcers, pancreatitis, diabetes, thyroiditis, cardiovascular disease, cirrhosis, glonerular endotheliosis, polycystic kidrey disease, endocrine disorders, obesity, bacterial infections and particularly cardiomyopathy, atherosclerosis, call signal processing-related disorders and disorders of metabolic pathway regulation. NoVX nucleic acids and polycytic call and are also useful as targets for the binds to a NOVX protein, and are also useful as targets for the binds to a NOVX protein, and are also useful as targets for the profession call sequences can be used to identify acell notiliar copensor or probes for forensic piology and for identifying and cloning NOVX homologues in other cell types. Cells comprising NOVX nucleic acids are useful for studying the function and craning and for identifying and eloning NOVX homologues in other cell types. Cells are identifying and cloning NOVX homologues in other cell types. Cells are inversed and for identifying and eloning NOVX homologues in other cell types. Cells are intervaled.
                                                                                   Novel polypeptides and nucleic acids homologous to transmembrane receptor, thymosin, neuromodulin-like family of proteins for diagnosing, treating cancer, atherosclerosis, neurological, skin and autoimmune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        activity of NOVX proteins and for identifying and evaluating mo of NOVX activity. The present sequence represents DNA encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 1102 BP; 162 A; 371 C; 353 G; 216 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     prostatin precursor-like protein NOV14b
                                                                                                                                                                                                                                                                                                                                                                                             Claim 9a; Page 143; 323pp; English.

The present invention relates to the isolation of novel human proteases, and the nucleic acids encoding them. The sequences of the invention are useful for treating diseases and disorders such as cancers (e.g. breast, colon, lung), immune-related diseases and disorders (e.g. inflammatory diseases and asthma), cardiovascular diseases (e.g. restenosis and disorders (e.g. inflammatory thrombosis), brain or neuronal-associated diseases, metabolic coronary thrombosis), brain or neuronal-associated diseases, metabolic rheumatoid arthritis and psoriasis), central or peripheral nervous system circumatoid arthritis and psoriasis), central or peripheral nervous system disorders, metabolic diseases, migratines, pain, sexual dysfunction, mood disorders, attention disorders (e.g. Alzheimer's disease, Parkinson's disease, and psorporial disorders (e.g. Alzheimer's disease, Parkinson's disease) and dyskinesias. The nucleic acids and polypeptides are also useful for treating viral infections such as ocular disease (e.g. virus (HIV), and non-viral infections such as ocular disease (e.g. virus (HIV), and mon-viral infections such as ocular disease (e.g. virus (HIV), and mon-viral infections such as ocular disease (e.g. virus (HIV)).
                                                                                                                                                                                                      Nucleic acids encoding novel human proteases, useful for useful for treating diseases and disorders such as cancers, immune-related diseases and disorders, cardiovascular disease (e.g. restenosis) and inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            sequences encoding for the novel human proteases of the invention

The invention relates to an isolated Protein Modification and Maintenance (PMM) polypeptide. Polypeptides of the invention may be used in the diagnosis, treatment and prevention of disorders associated with decreased expression or activity of PMM. These include gastrointestinal disorders (e.g. Crohn's disease), cardiovascular disorders (e.g. typertension), autoimmune/inflammatory disorders (e.g. anaemia), cell hypertension), autoimmune/inflammatory disorders (e.g. anaemia), cell proliferative disorders, developmental disorders (e.g. Alzheimer's disease) reproductive disorders (e.g. Alzheimer's disease) reproductive disorders (e.g. Alzheimer's disease) accine for such diseases. They may also be used in the assessment of the effects of exogenous compound on the expression of nucleic acid and amino acid sequences of protein modification and maintenance molecules. The current sequence represents a human PMMM encoding sequence of the invention, encoding a polypeptide which has been found to have homology
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     118 HisThrArgAlaValAlaAlaIleValValProAlaAsnTyrSerGlnValGluLeuGly 137

and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a full length human cDNA of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 296

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel human prostasin-like serine protease polypeptide and polynucleotide which can be regulated for treating metastasis of malignant cells, inflammation, atherosclerosis, neurodegenerative disease and infections.
used to modulate, frame activity in a disease, such as metastasis of malignant cells, tumour angiogenesis, inflammation, chronic obstructive pulmonary disease (Cop), atherosclerosis, neurodegenerative disease (e.g. prion protein amyloid plaques of Genstmann-Straussler Syndrome, Creutzfeldt-Jakob disease, Scrapie) or infection, particularly viral infection. The human prostasin-like serine protease gene provides a therappeutic target of decreasing human prostasin-like serine protease activity, in particular for treating or preventing metastatic cancer. The agonists and antagonists of the mucleotide sequence may be used to mimic,
                                                                                                                                                                                                                                                                                                                     antiatherosclerotic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention comprises the cDNA and protein sequences of an isolated prostasin-like serine protease and reagents and methods for regulating the human prostasin-like enzyme activity. Prostasin is a trypsin-like serine protease purified from human seminal fluid. An antibody specific for prostasin-like serine protease is useful for immunodetection and diagnosts of micro-metastases, autoimmune lesions and renal failure in biopsy specimens, plasma samples and body fluids. The antibody may be used to modulate enzyme activity in a disease, such as metastasis of

                                   g
                                                                  ò
                                                                                                                           ò
                                                                                                                                                                                                                                                                                                                                             The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed care in diagnostics as expressed sequence tags for identifying expressed care in diagnostics of the control of (II) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a useful for generating antibodies against it, detecting or quantitating a useful for sepressing (II). (I) and (II) are useful for treating disorders or supplement. (II) and its binding partners are useful in medical imaging control abstract protein expression or biological activity. The prolypeptide and polynucleotide sequences have applications in displaymentics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and and to produce other types of data and products dependent on DNA and and an original activity. The mapping and the products dependent on DNA and an original activity and applications in the product of the types of data and products dependent on DNA and and an original activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   148
